DESCRIPTION OF THE INDEX

A key-word-in-context (KWIC) index has been prepared as an added feature of the *Human Resources Research Office Bibliography of Publications, As of 30 June 1965*. Since the KWIC index is an extensive listing, it has been bound as a separated annex for convenience in using it with the *Bibliography*.

The 1965 edition of the *Bibliography* has been compiled to provide as complete information as is feasible about HumRRO research publications and research by-products. It is arranged in three parts: Part I contains only items issued during FY 1965; Part II is a cumulative listing of all HumRRO published material; Part III presents research by-products. The KWIC index is based upon the information in Part II of the *Bibliography*.

Constructing the Index

The KWIC index is designed to provide a reasonably efficient means of searching a bibliography for references on a particular subject. The index is constructed by permuting and alphabetizing bibliographic titles on the basis of "key words"—those words in the title that present the greatest amount of subject-oriented content. Since titles typically contain several such key words, each title is listed separately for each key word occurring in the title. As the following example shows, a title containing four key words would be listed completely in four different places in the index depending on the alphabetic occurrence of the key words. The key words are aligned down the middle of the page for easy scanning; the remainder of the title is "wrapped around," following the key word and to its left. The endings of the titles are marked with virgules (////).

Example: (Each key word is underlined)

Title: An Annotated Bibliography on the Determination of Training Objectives

KWIC index entries:

ING OBJECTIVES///// AN ANNOTATED	BIBLIOGRAPHY ON THE DETERMINATION OF TRAIN
AN ANNOTATED BIBLIOGRAPHY ON THE	DETERMINATION OF TRAINING OBJECTIVES/////
ON THE DETERMINATION OF TRAINING	OBJECTIVES///// AN ANNOTATED BIBLIOGRAPHY
OGRAHY ON THE DETERMINATION OF	TRAINING OBJECTIVES///// AN ANNOTATED BIBL

Searching the Index

To search the index, one starts by framing a search question and selecting from it the key words. These key words are then looked up in the alphabetical key word listing and the titles in which they occur are inspected for relevance. If inspection of the titles listed under the first-selected key words does not prove fruitful, then synonyms have to be selected and searched. Titles that are somewhat related to the topic under consideration will usually disclose useful synonyms. For instance, examination of titles listed under "training" yields such synonyms as "education," "curriculum," and "course."

When titles that appear relevant are found, the reference codes preceding each entry are used to locate the complete citations in the *Bibliography*. The first letter of the reference code is an indicator of the *Bibliography* section with page numbers preceded by that letter. The second portion of the code is a reference to an alphabetical or chronological arrangement within that section. The last four digits of the code always specify the year and the sequence of the item within that year.

For the section of the *Bibliography* in which the Tasks are listed alphabetically, the second portion of the code consists of the first letters of the Task names. Thus, the code B/ACHIL/59/02 means to go to Section B, then alphabetically to the Task beginning ACHIL, chronologically under ACHILLES to 1959, the second item dated 1959.

In Section C, Exploratory Study Publications, the items are listed by their ES number. The codes for this section are of the form C/ES-2/60/01, meaning Section C, Exploratory Study 2, etc. Likewise in Section E, Basic Research, items are listed by their BR number. Codes in this section take the form E/BR-4/62/01.

In the remainder of the sections, items are listed in straight chronological order. These codes are of the form D/65/03, meaning section, year, and sequence of the item within that year.

It will be noted that titles are not always listed in the index in exactly the same way as they are in the *Bibliography*. Because of space limitations of the computer printout, some of the longer titles had to be edited; however, every effort was made to retain the original context.

The alphabetical ordering by subject content of the key words, and the replication of titles, make it possible to enter the KWIC index at any point and scan only those titles that contain concepts of current interest to the literature searcher.
